

The 12 Data Management Principles

Data is Valuable

Unique asset properties

Value expressible in economic terms

DM is a Business Requirement

Managing data = managing quality

Metadata is required to manage data

Planning is required to manage data

DM requirements must drive IT decisions

DM Needs Diverse Skills

Cross-functional by nature

Requires enterprise perspective

Accounts for multiple perspectives

DM is Lifecycle Management

Data has a lifecycle to manage

Different data types, different requirements

Risk management is part of DM

Leadership Commitment Required
